

High-Stakes Tension: The Southern Caribbean Energy Matrix and the Regional Push for Renewable Energy

**Thursday, March 4, 2021
10:00-11:30 am EST | Live Webinar**

The Caribbean is working towards regional cooperation in renewable energy and a global transition away from dependence on fossil fuels. At the same time, game-changing financial opportunities related to the discovery of large oil reservoirs in the region pose challenges to that effort and will certainly continue to have significant impact on domestic economies, political governance, geopolitics, international cooperation and environmental protections. Panelists will examine the Caribbean's complex energy landscape and highlight the tensions that continue to impact the region, its policy, and its people.
